

DOR-JAM LIMITED ENVIRONMENTAL POLICY

Dor-Jam Limited source and supply timber based products, such as doors, door frames, window frames and bespoke products.

The timber and associated products being utilised or sold are sourced worldwide. The company is committed to sourcing all timber and associated products from legal sources, where, our suppliers assure us they only use materials where a sustainable yield management policy is adhered to and where they have good conservation and re-generation policies, all in accordance and within the realms of the laws of their country.

Dor-Jam Limited actively source from and encourage suppliers to commit to recognised third party environmental schemes such as FSC, PEFC and Forests Forever. In doing so we seek evidence of compliance from these suppliers that they are operating within the schemes' guidelines.

Dor-Jam Limited supports and promotes the use of 'engineered' timber components, especially in the production of hardwood doors imported from the Far East.

Our customers and end users can be assured that Dor-Jam Limited does everything within its powers to ensure a constant level of commitments to its environmental policy. This includes a high level emphasis on all employees involved with purchasing timber & associated products being actively encouraged to act in accordance with this policy. These employees are given the appropriate education and training whenever needed to keep them updated with any environmental issues relating to the timber and joinery industry.
